TEN EACH OF THESE TEN:

COMMANDER KOEHL. The best red so far produced, invariable winner in its class at the flower shows. Its gigantic florets of dark red are evenly colored throughout and are well placed on the spike, five to seven opening together. A tall and vigorous grower.

MARY SHARY. Tallest and largest of all the yellows; a soft primrose, deeper in the throat, unfading in the brightest sun, or under artificial light. Spike straight, growth vigorous.

MAID OF ORLEANS. A giant white bred by Pfitzer, with the typical mammoth florets of his strain; of milky white, with cream throat.

DEARBORN. Immense spike of deep light orange florets, each 5 to 6 inches across. Unrivaled in its color. Early.

EDITH MASON. Exquisite geranium-pink, large flowers, many open together.

MARMORA. Largest of the "smokies," a misty lavender-blue and rose, huge flowers, eight open at once.

MRS. T. J. KNUDSON. A clear light violet, with deeper plume in throat. A leader among the new blue-violets.

MRS. FRANCES L. KARCHER. Vivid orange scarlet, with tall, straight spike, and large florets, eight opening together.

PICARDY. Still undisputed champion of all. Huge spike, with immense florets, often ten open at once. Petals of waxy substance, slightly ruffled, apricot pink.

MINUET. True orchid coloring, giant flower, tall spike, vigorous grower, unquestioned leader of its color.

Read what 1938 buyers say:

"I am ordering your Rainbow Gladioli as the result of seeing this assortment in New Hampshire. They were some of the largest and finest flowers I have ever seen. Please send me 300 bulbs in lots of fifty, as I wish to give some away to friends."
EDGAR A. HALLETT,
Wesley Hills, Mass.

"I grew your Rainbow Collection of glads last year and I never saw such large flowers, especially from young bulbs. Picardy grew 5 feet high."

EDWARD C. SCHMAKEL,
Toledo, Ohio

"Last year I ordered 100 of your Rainbow gladioli and they were beautiful. The white ones were more than beautiful and kept in the house for more than a week. I have a friend who has paid as high as 50 cents a bulb and she herself said that they could not equal some that I had."

MRS. M. A. CAMPBELL,
Washington, D. C.

IF YOU set out with no limit on cost to buy the very finest gladioli in the world for your garden, these ten varieties would be among the first on your list.

It is difficult to believe that flowers of such quality can be purchased for so low a price. The explanation is found in the fact that we are the largest growers of gladiolus bulbs in the world. In our farms in Michigan, Illinois and Oregon, we produce millions of bulbs. Taking especial pride in the value of our Rainbow collection, we plan far in advance to grow bulbs for it.

As soon as a new variety appears which surpasses others of its color, we begin working to include it in the Rainbow offer. Its introduction price may be more for a single bulb, than you pay for 100 Rainbow glads, but in a surprisingly short time, thanks to intensive production, you find it in this offer.

Rainbow bulbs are not first size bulbs. Many who are not familiar with glads may think them too small, at first glance. They forget that the size of a seed does not always agree with the size of the flower it produces. Rainbow bulbs produce exhibition

flowers, taking a few more days to do it than larger bulbs may.

We recommend that you buy as many Rainbow glads as you have room to grow. Plant one collection early, another two weeks later, and so on until June, and you will have a constant supply of glorious cut flowers.

If your space is so limited that you cannot plant 100 bulbs, we offer the Rainbow below in a half portion.

Bulbs will be shipped separate from other items when danger of freezing in transit is past, or at proper planting time.

**1/2 Portion
50 BULBS \$1**

**You may order half a
Rainbow Garden Col-
lection, 5 bulbs each
of the 10 varieties
listed above, pre-
paid for \$1.00.**

Dahlia fans, familiar with the prices of new varieties, will instantly recognize the remarkable value of this collection.

Dozens are introduced each year, but not all endure. As some are dropped, real champions take a lead which may be unchallenged for years.

Every variety in this list is such a champion, new, but tried and tested long enough to insure its outstanding merit. These eight varieties, offered at a price which would not have bought one a short time ago, will give you a dahlia display which few gardens can equal. The crop of tubers will be worth many times the cost of the collection.

YOU CAN GROW GIANT DAHLIAS. We provide directions with each order which will enable any conscientious amateur to produce flowers of exhibition quality from either of the collections offered on this page.

For beginners the set of 10 for \$2 is especially recommended. They are varieties which have led in their respective classes for several years while at the same time the supply is plentiful enough to permit of a lower price.

Newest Rust-Proof Snapdragons

Culture: A or B (Mar. to April), D or E (Feb. to March)

By developing a strain of snapdragons immune to rust, scientists of the University of California have restored this brilliant flower family to leadership as a garden subject. Rust is a widespread disease which discolors the leaves and saps the vitality; if you have found snapdragons difficult to grow, rust is probably responsible. Growing the Rust-proof strain, difficulties disappear. Seeds germinate better, plants are more vigorous, the foliage clean, flowers large and of fine color and the flowering season prolonged.

Two Tropical Water Lilies

Prepaid 300 Miles \$3.65
Value \$4.50

One each Frances Beardsley Griffith, the sensational new deep purple leaf propagator; and Missouri, the finest of all Night-bloomers (see below for full descriptions of these outstanding varieties).

BECAUSE no other single group of plants (with the possible exception of the greenhouse orchid) seems so exotic and so lovely, many imagine Water Lilies to be prohibitive for the smaller garden.

Yet they can be grown to perfection in an inexpensive pool.

No other feature of landscape design can take the place of the garden pool. In the small garden it creates an illusion of space. Every garden needs the clear blue reflection of the sky as part of its pattern. And it would be difficult to find a satisfactory substitute for the colors, the fragrance and the form of both Tropical and Hardy Water Lilies.

It can be made to harmonize with either natural or formal styles. It will furnish a home for gold fish, and other aquatic animal life, while the bog plants and water lilies which can be grown in it have both beauty and strangeness to attract all.

For all its beauty, no plant is less exacting than the Water Lily. Full sun—warm water—and a bushel of soil per plant (even less for the tub varieties) are all these exotic beauties demand to produce flowers through the entire summer.

Tropical Water Lilies

These cannot be planted until after June 1st to 15th in the vicinity of Chicago, but are usually in full bloom by mid-July. Flowers are huge, borne on long stems that rise above the surface. All varieties listed below except Missouri, are day bloomers.

PINK

General Pershing: The standard variety in this color class. \$2.00.

Pink Pearl: Far better than Pershing, clearer in color, freer flowering, and grows easily for everyone. Really choice. \$2.00.

Mrs. W. R. James: A better grower than General Pershing, and the deepest of all pink Tropicals. \$2.00.

LAVENDER AND BLUE

August Koch: Vigorous, free, easy to grow, this has for years been the most satisfactory "near-blue." Actually a rosy-lavender. \$1.75

Blue Beauty: Perhaps the largest blue and truest in color, but not the most vigorous plant. Huge flowers. Also called Pennsylvania. \$2.25.

Governor Emerson: Much superior to Blue Beauty, though slightly darker the first day. Later, it is the same color. The freest bloomer among the blues. Really outstanding. \$2.00.

Frances Beardsley Griffith: Perhaps superior to August Koch in habit of plant (which is high praise) and of the most vivid, deep pansy-purple it is possible to imagine. We cannot say too much about this novelty. \$2.25.

WHITE

Missouri: For some time, we have refrained from listing night-bloomers because of their intolerance of cool water. However, Missouri is not as sensitive, and for sheer beauty is unmatched by any white water lily in the world. Huge flowers that will perfume the whole garden from dusk until after sunrise the following morning. \$2.25.

CULTURE OF WATER LILIES

SOIL: Any good garden loam is satisfactory, but where soil must be brought in, the best type is a heavy clay loam of the type used for roses. Do not use gravel, sand, peat or leafmould.

FERTILIZER: To ten parts of soil, add one part of Vaughan's Balanced Plant Ration, and mix well. Or one part of shredded cattle manure or pulverized sheep manure may be added to four parts of soil.

BOXES: In small pools, the plants are best set in boxes, which, if made of pine or cypress and kept under water, will last for 20 years. Boxes should be at least 12" deep and 18" by 18" in surface area. While certain varieties can be grown in smaller boxes or tubs, these do better in the larger container.

PLANTING: Fill the boxes within two inches of the top, and pack well. Set the tuber upright, leaving about two inches of the crown above the surface of the soil. Then fill to within half an inch of the top with coarse sand. If large goldfish are kept in the pool, a thin layer of coarse gravel will keep them from disturbing the soil.

Three Hardy Water Lilies \$3.65

Prepaid 300 miles. Catalog Value \$6.25

One each Gonnere, the "snowball" white; Somptuosa, the best pink, and Sunrise, the outstanding yellow. (See below for full descriptions of these marvelous hardies.)

Hardy Water Lilies

Unlike the Tropicals, these are not sensitive to cold water, and will make satisfactory bloom if set out any time when the pool is free from ice. With proper handling, they can be brought through the winter by the amateur, which is not practical in the case of Tropicals. While the flowers are smaller, they are borne in great profusion and stay open during the entire day.

PINK

Marliac Rose: A large, loose, rose-pink flower of great vigor. \$1.25.

Rene Gerard: A deep old rose, sometimes classed as a red. Choice. \$2.00.

Rose Arey: A large cerise pink that is considered a standard by everyone. Very free. \$1.25.

Somptuosa: True stock of this fine pink has been almost impossible to get. The largest of all pink hardies. Petals rose-pink with vivid orange stamens. A sensational variety. \$2.00.

YELLOW

Marliac Yellow: (Chromatella) An indispensable yellow variety, grows easily for everyone, yet good enough for the finest collection. \$1.25.

Sunrise: Because of the superior beauty of its flowers, this variety is often planted with tropical water lilies, since it carries its huge yellow flowers above the water on stiff stems. We consider it even better than the so-called "Yellow Tropical" since it is larger, freer in bloom, and the color is deeper. \$2.25.

RED

James Brydon: The small leaf spread and moderate growth of this rich crimson variety makes it suitable for small pools and tubs. Choice. \$1.75.

Gloriosa: A deep carmine-rose of unusual brilliancy. Vigorous growth and free-blooming. \$1.75.

Attraction: A gorgeous garnet red with ruby shading. \$2.00.

CHANGEABLE

Paul Harriot: By far the most satisfactory of the changeable hues. Opens soft yellow, deepening to apricot and coppery orange. Each, \$1.25.

WHITE

Marliac White: So much freer blooming and more beautiful than the old common white that we no longer catalog the latter. So vigorous that it can be naturalized in ponds, yet is fine enough to include with the best. \$1.00.

Gonnere: This huge white flower has so many petals that the blooms resemble snowballs. No other white approaches this variety in beauty of form. Considered the finest of all. \$2.00.

Vaughan's Bent and other Fancy Grass Seeds

Bent Lawns From Seed

ASK FOR OUR BENT LEAFLET

Bent grasses are increasingly popular for lawns; especially in cities where lawns are small in area and extra care is not burdensome.

For a long time the planting of creeping bent stolons was the only way known to obtain a turf of pure creeping bent. Then creeping bent was found growing wild on the Pacific coast which produced seed.

It is cheaper to grow creeping bent from seed and the varieties grown from seed do not spread so fast as the varieties grown from stolons, and, therefore, do not require so much cutting. Seed at the rate of 3 to 4 lbs. per 1,000 sq. ft.

ASTORIA BENT

Astoria Bent is identified by its numerous rootstocks which spread underground and throw up new shoots, making a very thick turf and by the presence of runners above ground in the early stages of development. This bent has a good color and is excellent as both a lawn and putting green grass. It does not require as much cutting as creeping bent. We highly recommend this type.

SEASIDE BENT

This is a true unmixed Creeping Bent grass seed which spreads by surface runners instead of by the underground root stalks which characterize the Astoria Bent. It is very popular along the coastal sections of the country.

COLONIAL BENT

This species was originally known in this country under the name of Rhode Island Bent. It is a fine bladed grass of very good color, in every way as desirable as creeping bent, except that it does not creep, but does spread somewhat from the roots and in the course of several years will thicken up provided it is fertilized properly.

Let us help you solve your lawn and golf grass problems. Advice gladly given on handling fertilizer problems, and combating insect and disease attacks.

GOLF

We have a golf department prepared to give expert service. Let us quote on your requirements.

Fertilizers are Needed to Make Lawns Grow

Fine lawn grasses require rich soil in which to do their best. When properly fed they will grow so luxuriantly as to crowd out weeds. Grass which is constantly cut makes a heavy drain on the food content of soil, and unless this is annually renewed, a lawn will deteriorate. On page 101 are listed fertilizers of all types which are recommended for lawns. Our free booklet, "Your Lawn", gives definite instructions on the use of fertilizers.

All Lawn Seed Prepaid
Anywhere in U. S. A.

The market is flooded with cheap mixtures, adulterated with quick show grasses such as timothy, a hay seed whose coarse stems ruin the lawn. The few cents saved are soon forgotten, while the troubles and expense due to poor seed far exceed the saving. Buy only seed on the quality of which you can depend.

We unreservedly recommend Vaughan's Chicago Parks Lawn Seed wherever a lawn is desired which combines the maximum of beauty and durability with a minimum of expense and care. This splendid formula remains the universal favorite.

The basis of VAUGHAN'S "CHICAGO PARKS" lawn seed is a large amount of the finest Kentucky blue grass, which is combined with other suitable grasses in the proper proportions to produce a fine permanent turf. Needless to say it does not contain timothy, which is a hay grass and does not belong in a lawn; none of Vaughan's formulas include this unsuitable grass.

Price, ½ lb., 25c; 1 lb., 40c; 2 lbs., 80c; 3 lbs., \$1.15; 5 lbs., \$1.85; 10 lbs., \$3.50; 15 lbs., \$5.15; 20 lbs., \$6.75; 25 lbs., \$8.25; 100 lbs., \$30.00.

We offer this mixture without clover under the name "Vaughan's Fairway Formula"—Prices same as "Chicago Parks."

For the Lawn Beautiful, Permanent, Practical, Sow Vaughan's Chicago Parks.

Vaughan's Special Lawn Mixtures

We recommend our lawn mixtures, composed of suitable varieties of grass seed, because results are more satisfactory from a correct combination of grasses than from a variety sown alone. Our grass seed division has long been known as an authority on growing fine turf, and for the guidance of our customers we send our booklet on lawn-making upon request and without charge. A copy of this booklet is enclosed in every carton and bag of Vaughan's lawn seed mixtures.

For Your Protection—Always remember that we neither buy nor sell seeds that are not tested in our own officially recognized laboratory for purity, germination and identity.

Quality versus Price. Our constant aim has been to harmonize our never changing superior qualities of seed with such reasonable and fair prices as will be entirely satisfactory to our customers. In this respect we have every reason to believe we have been successful. Because of shortages on some of the fancy imported grasses some of our prices have been advanced. Our quality continues to meet the same high standards we have maintained in the past.

Vaughan's "Private Estate" Bent Formula

FOR LAWNS "DE LUXE"

The unexcelled beauty and velvet smoothness of creeping bent putting greens has caused a demand for a lawn mixture which contains seeds of the bent grasses.

For those who are interested in bent grass we highly recommend our Private Estate formula, as it will require less mowing and less attention than pure bent grass lawns.

Private Estate formula produces a fine, heavy turf, which with proper care will constantly improve. This mixture does not contain clover.

VAUGHAN'S TERRACE FORMULA

A combination of grasses that root quickly and form a good turf under conditions met on terraces. After seeding terrace, rake in the seed thoroughly and if possible add a quarter of an inch top dressing of good black soil to provide a good cover for the seed. Then roll thoroughly or compact the soil with the back of the spade. Seed Vaughan's Terrace Formula at the rate of 1 lb. to every 250 sq. ft. If slope is very steep, seed 1 lb. of oats to every 100 sq. feet with the lawn seed and proceed as directed above. Begin mowing as soon as the oats are high enough to cut, and keep cut. Asparagus

ASPARAGUS from the home garden is one of the most delicious and earliest of crops. It may be grown in any deep, rich soil, either from seed or roots.

SEED PLANTING— Asparagus may be raised from seed and a crop obtained in three years. In early spring sow the seed, after soaking it twenty-four hours in warm water, in drills about one foot apart and one inch deep. The following spring, select the best of the roots and place in the permanent bed. One ounce of seed will sow 100 feet of row, producing 300 plants.

ROOT PLANTING— A year may be saved by buying the plants and setting them two feet apart in the row, and the rows four feet apart. Plant in a trench 12 inches deep, at the bottom of which is 2 inches of well rotted manure. Add 5 lbs. of a balanced plant food to each 100 feet, well mixed with soil. Cover roots 3 inches deep and add more soil as they grow until the ground is level.

WHITE ASPARAGUS. White Asparagus may be grown from the same variety as green. It is merely a method of growing. The stalks are hilled with earth and cut underneath the ground before exposure to the light has turned them green.

WASHINGTON RUST-RESISTANT STRAIN. Developed by the experts of the United States Department of Agriculture, which originated this strain. Rustproof plants are preferred by commercial growers. Since the differences between varieties of asparagus are not great, given the same soil and cultivation, freedom from disease is of dominant importance. The most satisfactory strain is MARY WASHINGTON.

MARY WASHINGTON stock is so far the most satisfactory of the two strains. It is the result of a single cross. Pkt., 10c; oz., 15c; ¼ lb., 40c.

BONVALLET'S GIANT. Equally good grown white or green. Pkt., 10c; oz., 15c; ¼ lb., 35c.

Bean Cultural Notes

Beans are very tender. The seeds must be sown where they are to grow when frost has ended and the ground is warm. Sow in rows about fifteen inches apart. Keep the surface soil soft and the rows free from weeds. Do not cultivate when the plants are in bloom, or when the vines are wet with dew.

EDIBLE SOY BEANS

Of recent use in being developed into edible qualities and sufficient data on desirable qualities to warrant the offering. Excellent for Diabetics as in the dried state they contain 9 to 12% of available carbohydrates.

They can be cooked as Navy beans or if interested in other uses write the University of Ill. Urbana, for their Bulletin "Ways of using Soy Beans as Food." Pkt. 20c; ¼ lb., 45c; lb., 75c.

Tendergreen Bean Leads the Green Pods

Our Seeds are Hand Picked
from Carefully Rogued Crops
Grown on Our Own Farms

***Tendergreen.** 52 days. A main crop variety of the stringless round pod type, with tall vines which carry their pods free of the ground. A heavy yielder, bearing long pods, fleshy and of excellent flavor. It is an improvement on Full Measure, which we are dropping from our list; and we recommend it for both home and market. Pkt., 10c; $\frac{1}{2}$ lb., 20c; lb., 35c; 2 lbs., 60c; 3 lbs., 75c; 5 lbs., \$1.15; 10 lbs., \$2.00.

TENDERGREEN'S 6 INCH PODS ARE STRAIGHT AND ABUNDANT. Pkt., 10c; $\frac{1}{2}$ lb., 20c.

QUALITY in beans is measured by stringlessness; by tenderness, or the absence of fibre, or "linen" in the pod; by ability to produce well; and by the pod, a long, straight pod being preferred. Fine strains of good varieties excel inferior strains in all these qualities, the difference between strains often being as great as the difference between varieties.

Our beans are grown on our own farms, or by expert growers under contracts which require that methods shall be used which involve increased expense but result in greatly improved quality. After the harvest our beans are hand-picked, to discard all seeds which do not conform to the ideal type. The improvement in your crop far outweighs the increased cost.

Limas—a Luxury Crop

LIMAS should be planted a little later than the other running beans, in the most favorable location possible, as they are very late in maturing. Always plant with the eye down. They may be sown in hills, or in rows, and allowed to run on chicken wire or strings and thinned to eight or ten inches apart. The Bush Lima is more easily grown than the tall, and is earlier and more economical of space.

FORDHOOK BUSH, Pkt., 10c.

BUSH

Packet plants 20 ft.; lb., 150 ft.

***Fordhook Bush.** 78 days. The highest quality Bush variety, it grows erect, and its large pods contain 4 to 5 large, thick, beautiful green beans. In contrast with older varieties, which were dry and mealy, Fordhook is tender, sweet and juicy. For heaviest yield give each plant at least 18 inches in the row. Pkt., 10c; $\frac{1}{2}$ lb., 25c; lb., 40c; 2 lbs., 70c; 3 lbs., \$1.00; 5 lbs., \$1.50.

We strongly recommend it for both home and market. Pkt., 10c; $\frac{1}{2}$ lb., 25c; lb., 40c; 2 lbs., 70c; 3 lbs., 90c; 5 lbs., \$1.25.

Tenderness is the Test of Table Quality in Beets

QUANTITY in beets is measured by an even, globular shape, uniformity in size, bright, even color, flavor, fine texture and tenderness. Here as with all vegetables, the difference between a fine and a mediocre strain of one variety may be as great as between different varieties.

Our best seed is grown only from transplanted roots, which are taken up in the fall, carefully graded, stored over the winter and transplanted again in the spring. Only beets which conform to the highest quality standards are planted for seed. Thus improvement is shown annually in progress toward perfection.

While this extra care increases the cost of the seed, the increase is small compared with the added value which improved quality gives to the crop.

Beets are easily grown in the home garden, and provide appealing dishes throughout the year. When they are thinned out in the spring their tops and leaves make a delicious dish.

★Perfected Detroit. *Matures in about 50 days.* In this improved strain of Detroit Dark Red Turnip beet the fine qualities which have made that variety standard for main crop sowing have been strengthened by careful breeding. It is as near perfection as breeding skill has attained, earlier, and almost spherical in shape, which is most desirable for pickling and canning. Its small tops are just right for either dry or wet season, heavy or light soil. The color inside and out is a very dark red, and flesh of fine texture, tender and of excellent flavor. Tender Young Carrots Are a Table Treat

Which Only Home Gardeners Can Enjoy at Its Best

CARROTS have been improved in quality at the same time their value as a health food has been gaining wider recognition. In addition to color, size, shape, tops and season of maturity, our special strains are selected for sweetness, and the tenderness and even texture of the flesh, especially for a minimum of "core." Scientists say the brighter the color, the more Vitamin A in carrots.

The expense of the extra care needed in selecting the best plants, together with the reduced seed crop which results from discarding the "rogues," necessarily increases the cost of selected strains; but the added cost is insignificant compared with the improvement which results in your crop.

★Redheart (Rotherz). Matures in about 70 days. This variety has demonstrated its merit in our trials. It is the finest flavored, tenderest carrot of its type. It has no core of the usual sort, but its rich red coloring is even throughout the flesh. The top is ample for bunching and the foliage is fern-like. The root is of medium length, blunt, smooth and easily prepared for serving. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.50.

New Bunching. Matures in about 77 days. Tops short, stems medium size and strong, 8x1½ inch, almost cylindrical with rounded shoulders and a well stumped point. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.25.

★Nantes Half Long Scarlet. Matures in about 68 days. This early variety is not surpassed in tenderness and sweetness. The tops are small, the roots bright orange, smooth and cylindrical, 6 to 7 inches long. There is almost no core, and this variety gives the home gardener supreme table quality, at whatever stage it is harvested. Pkt., 10c; oz., 25c; ¼ lb., 60c; lb., \$1.75.

★Table Queen. Matures in about 68 days. Excels in sweetness, crisp tenderness and vivid yellow color which bespeaks abundant Vitamin A. Half-long type, rich red, tender, crisp and one of the sweetest we know. Pkt., 15c; oz., 25c; ¼ lb., 75c; lb., \$2.75.

You Can Grow Your Own Celery

CELERY is often thought to be difficult to grow. Every home gardener whose soil is sufficiently light and rich to produce good cabbages may easily produce a family supply of this most welcome delicacy. Start the seed indoors and set the plants out around the middle of June. Eight inches apart for the early kinds and a foot for the winter varieties. Do not work over the plants when they are wet with dew or rain.

Vaughan's Celery Seed is of the finest strains in the world and is used by market gardeners selling to the most exacting trade.

Quantity needed for 400 to 500 plants, 1 pkt.; 8,000 plants, 1 oz.

★Golden Detroit. The plants are heavy, compact and full hearted. Stems are broad, very thick, rounded at the edges and the edible portion is about 7 inches long. The leaves are a clean bright green, the stems blanch easily and are very free from strings. Cauliflower You Will Be Proud to Grow

CAULIFLOWER quality is judged by the size and uniformity of the heads and the tenderness and fine texture of the flesh.

With our Danish growers our contracts provide for roguing of the growing plants, to insure a high standard in the crop which you will grow. Owing to this expense costs are increased, but the additional cost of the best strains is small compared with the difference in your crop.

Home gardeners have a right to be proud of success with cauliflower. Yet it is not difficult where conditions are right. When plants are set out in June or early July to mature in October, there is seldom any question of getting fine, large heads.

Quantity needed for 150 plants, 1 pkt.; for 1,500 to 2,000 plants, 1 oz.

New Sprouting Broccoli

BROCCOLI, which has become popular throughout the country in the last few years, is a cousin of the cauliflower, having a similar but more delicate flavor. The type which has won greatest popularity produces a terminal head which may be cut, whereupon other heads are produced on lateral branches, which in turn may be harvested. Typical center heads are shown in the illustration. It survives light frosts, and produces well in the cool autumn weather. Sow in the open in May, and transplant to eighteen inches apart in the garden row.

★Italian Green Sprouting (Celabrese). Matures in about 120 days. A selected strain of the most popular type from an Italian specialist who has bred it to a high standard of yield, flavor and tenderness. After its large center heads are harvested, smaller heads 2 inches in diameter form at the ends of lateral branches. It continues to bear for eight to ten weeks. Pkt., 25c; oz., 60c; $\frac{1}{4}$ lb., \$1.75.

PAOTING. Pkt., 10c. "PE TSAI." Pkt., 10c.

Quantity needed for 30 ft., 1 pkt.; 200 ft., 1 oz. The VAUGHAN **★Celery Cabbage Pe Tsai.** Strain. This exceptionally fine vegetable is rapidly growing in public favor. Its growth resembles the Cos lettuce, but the outer leaves have the general texture of ordinary cabbage. When the outside leaves are stripped away, the cabbage presents a well nigh irresistible appearance. Our strain of this seed is grown in China by a specialist whose family has raised and selected this particular type for many years. The heads blanch without tying. July is the proper planting time. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25; lb., \$4.00.

Cardoon

Main stalks are blanched like Celery; used for salad or in soups. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 75c.

Savoy Cabbage A Table Delicacy

This type of cabbage has leaves which are crumpled or savoyed instead of smooth, as in other types. The heads are not as tight as the smooth leaved type, but are of superior flavor, and are esteemed for table quality. They are especially favored by many good cooks for stuffing with ground meats. Try them in the home garden.

IMPROVED AMERICAN SAVOY. (Long Island strain.) The best main crop variety of this type. The vigorous short stemmed plant bears a large, fairly solid head, sweet and tender. Pkt., 10c; oz., 35c; $\frac{1}{4}$ lb., \$1.00.

It excels in all the qualities that mark a good cabbage, besides being 100 percent resistant. A better keeper, of finer texture and matures earlier than Wisconsin No. 8. We sincerely recommend this for home garden and market growers. Pkt., 15c; $\frac{1}{2}$ oz., 35c; oz., 65c; $\frac{1}{4}$ lb., \$1.75.

***Globe.** 80 days. The resistant Glory of Enkhousen is but 3 or 4 days later than Copenhagen, of excellent flavor. You who think that there is no difference in the flavor of cabbage should compare a mature Globe with any other cabbage. Pkt., 15c; $\frac{1}{2}$ oz., 40c; oz., 70c; $\frac{1}{4}$ lb., \$2.00.

WISCONSIN ALL SEASONS. 98 days. Either a kraut or home variety, but is used more for kraut than any other purposes. Pkt., 15c; $\frac{1}{2}$ oz., 25c; oz., 45c; $\frac{1}{4}$ lb., \$1.40.

***Bugner.** 100 days. Our own Bugner Cabbage was a failure this year, but we have purchased from what we consider one of the most reliable sources. We had a sample of this cabbage in trials at Racine and it was 90% resistant so that we feel quite safe in offering this to our trade. Pkt., 15c; $\frac{1}{2}$ oz., 35c; oz., 65c; $\frac{1}{4}$ lb., \$1.75.

*Reselected Copenhagen Market Extra

Early. Matures in about 62 days. Earliest of the large heading cabbages, maturing even before the conical types, this select strain is of unique value both to home and market growers. It is the result of many years' selection by our European grower, and produces heads round as a ball, crisp, tender and of fine texture. Market growers have reported their entire crop of this strain harvested before heads from other seed of this variety were ready to cut.

Reselected Tested Stock, 62 days, Pkt. 15c; oz., 50c; $\frac{1}{4}$ lb., \$1.50.

Standard Stock, 68 days, Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 90c.

***Daybreak.** 60 Days. It bears a round, hard head with short stem and was developed by one of the best growers in Denmark, in whose trials it matured 65% in 60 days, averaging 3 pounds, 12 tons to the acre. Earliest Copenhagen Market strain matured 50% in 75 days, averaging 4 $\frac{1}{2}$ pounds, 18 tons to the acre. The same relative performance may be expected in this country. Pkt., 15c; $\frac{1}{2}$ oz., 25c; oz., 45c; $\frac{1}{4}$ lb., \$1.25.

***Golden Acre.** Matures in about 60 days. This early round headed variety is slightly earlier than our reselected extra early Copenhagen Market and is similar in most other respects, except that its heads are slightly smaller, 4 to 5 lbs. It is of dwarf, compact growth, with few leaves so that the plants can be set close together, and is exceptionally uniform in size and maturity date. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 45c; $\frac{1}{4}$ lb., \$1.25.

***Glory of Enkhousen.** Matures in about 80 days. This globe shaped, medium early variety is of excellent flavor and crispness and produces heads weighing 8 to 10 pounds, and more uniform than the earlier types. Our strain is grown by the originator and is recommended for the main crop in the home garden. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c.

PENN STATE BALLHEAD. 100 days. A heavy yielding strain of the short stem Danish Ballhead type bred by Dr. Myers of Pennsylvania State College. Yields as high as 26 tons per acre have been recorded. Pkt., 15c; $\frac{1}{2}$ oz., 35c; oz., 60c; $\frac{1}{4}$ lb., \$1.75.

VAUGHAN'S SELECT EARLY JERSEY WAKEFIELD. 62 days. This extra early conical-shaped head cabbage is a specialty with us, and to secure the best seed on our growing farms we spare no expense. In some sections, conical heads are preferred to round heads for the early crop. The heads are hard, the outside leaves small, so that close planting is possible. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c.

EARLY FLAT DUTCH. 75 days. Sure solid header; weighs 10 to 12 pounds. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; lb., \$2.25.

CHARLESTON WAKEFIELD. 73 days. This sort matures later than "Jersey Wakefield," with heads much larger and uniform. Very popular with Southern growers, it does well on heavy soil. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c.

QUALITY in cabbages is judged by uniformity of size and maturity date, tightness of head and crispness. In table quality as well as in points which are valued by market growers, superior strains of all standard varieties excel the ordinary grades of seed. The constant vigilance required to maintain quality, by discarding from the seed growing stock all plants which do not conform to the ideal type, increases the production cost but the increase is small compared to the difference in your crop.

If you have trouble growing cabbages owing to yellows disease in your locality, try seed of the resistant varieties described below.

Each year the seed stock from which these strains are grown is tested in yellows infected soil at Racine, Wis., where ordinary commercial strains die out completely. Plants which are healthy and of the best types are chosen to produce the first generation stock seed from which the commercial strains are grown.

Owing to the added expense of growing these superior strains, they cannot be priced in competition with other so-called resistant strains which are several generations removed from selected stock plants.

Quantity needed for 250 plants, 1 pkt.; 1,500 to 2,000 plants, 1 oz.

Sweet Corn All Summer, 25¢

Collection No. 22. One Packet each, Earliest Golden Sweet, Golden Bantam, and Bantam Evergreen, prepaid for 25c. ½ lb. each, 50c; 1 lb. each, 85c.

ONLY by the home gardener, who picks and serves it without loss of flavor, can sweet corn be enjoyed at its supreme best. We are specialists in sweet corn, and grow our finest strains on our own farms. Between our strains and many of the seeds offered under the same names, there is a great difference in size as well as in flavor. The increase in cost is small compared with the difference in your crop. Remember that after sweet corn is picked, its sugar content begins to turn to starch, and the sooner it is served, the sweeter it will be. If there is any delay keep it in the refrigerator.

A packet plants 40 hills; a pound 400 hills; 12 pounds an acre.

For Bowl Salad Give Me Leaf or Romaine Lettuce

—Says Emile Foially, salad chef of the Hotel Sherman's famous College Inn, Chicago.

"They are far more tender and better flavored; and take the salad dressing perfectly, which is important. And the doctors say their green leaves have more vitamins. What a combination."

LEAF LETTUCE

★**Black Seeded Simpson.** *Matures in about 40 days.* The excellent qualities of this variety have been constantly improved in our select strain. Its large leaves in the rich green color which give proof of Vitamin C content, are thin, tender and crisp, the inner ones forming a loose head. It is one of the most vigorous varieties in hot weather and being slow to run to seed, it gives a long harvest period. It is especially adapted to the needs of the home garden.

Emile Foially is shown to the right making one of his famous salads with Romaine, or Cos lettuce.

QUICK, tender growth is necessary for quality lettuce. Our strains are selected for earliness, together with vigor in hot weather and slowness in running to seed, which is all important in our midwestern summers. Discovery that green leaves are richer in Vitamin C than blanched leaves is reviving the popularity of leaf lettuces, which are easiest for the amateur to grow.

Romaine or cos lettuce is recommended to home gardeners. It produces tender leaves of fine flavor which may be served green or may be bleached by tying up the heads, and it is as easy to grow as leaf lettuce. Head lettuce may be matured in the fall more easily than in the spring. Quantity needed to sow: 30 ft., 1 pkt.; 250 ft., 1 oz.

HEAD LETTUCE

★**New York No. 12.** *Matures in about 75 days.* This is the variety grown in California and shipped the year around to eastern markets. It is the largest of all head lettuces, often weighing two pounds. It matures slowly, first forming a conical head which becomes globular. It stands the hot weather well. Because of its size plenty of room must be given between plants. We offer the highly selected strain known on the Pacific Coast as No. 12. Our strain is specially selected for earliness and ability to withstand hot weather. Seed should be started indoors and the seedling plants can be set out when true leaves have been formed, as soon as the soil is prepared. Pkt., 10c; oz., 30c; ¼ lb., 75c.

★**Iceberg.** *Matures in about 80 days.* This makes a small head which is the tightest of any variety we know, and it resists hot weather well. Its leaves have small indents which fill with dew drops, giving the plant a crystalline appearance, hence its name. It is an excellent home garden variety and entirely distinct from New York, which is sometimes called Iceberg. Pkt., 10c; oz., 25c; ¼ lb., 60c.

★**New York No. 515.** *Matures in about 75 days.* This is a curled, crisp heading variety, large size, dark green. It is a cross between New York and Iceberg and was bred for resistance to tip burn, to which it shows strong resistance. Excellent for the home or market garden. Pkt., 15c; oz., 30c; ¼ lb., 75c.

★**Improved Hanson.** *Matures in about 80 days.* This tight-heading globe-shaped variety excels especially with its vigorous growth in hot weather, which makes it well adapted to midwest conditions. It has broad leaves, beautifully crinkled, tender and sweet. The outside leaves are a deep green, and the inner ones almost white. Pkt., 10c; oz., 20c; ¼ lb., 50c.

★**Imperial No. 847.** *There are many new types of New York being produced and we have selected the one found by experience to be the best suited to our conditions which we offer at Pkt., 15c; oz. 25c; ¼ lb., 75c; lb., \$2.00.*

VAUGHAN'S ALL SEASONS. 80 days. In 1879 we introduced this distinctive variety. It is still a favorite. Heads are large, solid and handsome. It stands hot weather well and is slow to run to seed. Pkt., 10c; oz., 20c; ¼ lb., 60c.

MAY KING. 60 days. Very early variety. The outer leaves are tinged with brown; they fold close, permitting close planting in frames—tender yellow heart. Pkt., 10c; oz., 20c; ¼ lb., 50c.

VAUGHAN'S BIG BOSTON. 75 days. With southern gardeners who ship north, this is considered the best early large heading sort. Its earliness makes it valuable for home gardeners in the north. Large heads of bright green leaves, very tender. One of the best varieties for forcing. Pkt., 10c; oz., 25c; ¼ lb., 60c.

CALIFORNIA CREAM BUTTER. 75 days. One of the best summer varieties, large solid heads, buttery flavor. Pkt., 10c; oz., 20c; ¼ lb., 50c.

MIGNONETTE. 80 days. A delicious, crisp, solid, small lettuce. Pkt., 10c; oz., 25c; ¼ lb., 65c.

The leaves can be pulled off each stem like a kale. It sends up a stout stalk three or four feet high, loaded with leaves. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.25.

New Giant Peppers

LIKE egg plants and tomatoes, peppers should be started indoors, as they take four to five months to mature. They are easy to grow, thrive in cool weather and will endure some frost. The plants should stand eight to eighteen inches apart in rows. They are constantly becoming more popular, both in salads and for use in cooking. A dozen plants will supply an average family. One packet produces 75 plants; one ounce, 1000 plants.

★**Early California Wonder.** *Matures in about 60 days.* A quality giant which is recommended for the home garden. Mild, sweet, mid-season, it produces fruits to equal the largest, 4 inches in diameter by 4½ inches long, with thick flesh and bright crimson coloring. Pkt., 25c; ½ oz., 75c; oz., \$1.25.

★**California Wonder.** A mild, sweet, mid-season variety, very large, measuring 4½ inches in length by 4 inches in diameter. It resembles Chinese Giant in form, but has much thicker flesh. It has a crimson fruit. One of the heaviest peppers grown, not as prolific as some but much more desirable. Pkt., 15c; ½ oz., 40c; oz., 70c.

★**"Windsor A."** This is a production of the Connecticut Agricultural College and is similar in structure to California Wonder. It is 5 inches long, one and one half to two inches at the shoulder and one to three points, more often one. The walls are very thick and it is especially sweet flavored. Much more productive than California Wonder and earlier. Pkt., 20c; ½ oz., 40c; oz., 75c.

★**Vaughan's Giant Magnum Dulce.** This fine mild pepper can be grown to immense size—7 inches long and 4 inches through—but when grown so large the yield is small. To get a large yield of medium sized peppers, pinch off the first buds. Pkt., 15c; ½ oz., 40c; oz., 70c.

★**Harris' Early Giant.** This is the heavy yielder among the large peppers. It is also earlier than other large kinds. The plants are vigorous, 18 inches tall, and the peppers 4 by 4½ inches. Color, deep green turning to red; flesh thick and very sweet. Pkt., 15c; ½ oz., 40c; oz., 70c.

WORLD BEATER. Fruits 5 inches long by 3½ in. diameter; flesh thick and mild; very productive and a good shipper. Pkt., 10c; ½ oz., 35c; oz., 60c.

CRIMSON GIANT. One of the earliest large red sweet peppers. In habit the plant grows two and one-half feet high and bears a large quantity of fruits. The peppers are large, deep green when young and a rich red when ripe; flesh thick, sweet and mild. Pkt., 10c; ½ oz., 45c; oz., 75c.

CHINESE GIANT. The fruit grows 4 to 5 inches broad on top and of equal length, and quite uniform in size; the flesh is unusually thick, mild flavored and makes a very fine salad sliced and served like tomatoes. Pkt., 20c; ½ oz., 45c; oz., 75c.

HUNGARIAN (Hot). A long, slender type of hot pepper much prized for canning. It is 1½ inches in diameter at the base and often 10 inches long. Pale green turning to red. Pkt., 15c; ½ oz., 40c; oz., 70c.

HUNGARIAN (Sweet). Same type as Hot Hungarian, but sweet. Pkt., 15c; ½ oz., 40c; oz., 70c.

RUBY KING. One of the most popular varieties, growing 4½ to 6 inches long, 3½ to 4 inches thick. The peppers are a bright ruby-red and quite sharp in flavor. Pkt., 10c; oz., 45c.

BULL NOSE, HOT. A pungent very early pepper. Pkt., 10c; oz., 45c.

PIMENTO PERFECTION. Flesh extremely thick and very mild. Must be started early in the north to mature. Pkt., 10c; ½ oz., 20c; oz., 35c.

LARGE BELL. Large, mild. Pkt., 10c; oz., 45c.

CAYENNE. Long, red, hot. Pkt., 10c; oz., 50c.

RED CHILI. Good hot pickling. Pkt., 10c; ½ oz., 50c; oz., 75c.

PARSLEY, Champion Moss Curled. Pkt., 10c.

VAUGHAN'S MARROWFAT PARSNIPS. Pkt., 10c.

Parsnips

PARSNIPS may be harvested at times when the garden has little else to offer. Let them remain in the ground over winter, and dig them during a thaw or when the spring thaw comes—they will be as sweet and tender as ever. A freeze is required to sweeten them. For the best results deep soil is needed, and fresh manure should not be used as it will cause the roots to divide. Quantity needed to sow 25 ft., 1 pkt.; 150 ft., 1 oz.

★**Vaughan's Marrowfat.** The accompanying illustration tells the story of uniform good size, fine shape, clean, smooth skin, and general handsome appearance which distinguishes this high-class variety. In richness of flavor it is unequalled. For exhibition purposes it is a winner. Pkt., 10c; oz., 20c; ¼ lb., 45c.

HOLLOW CROWN, LONG SMOOTH. Smooth, large, tender and sugary; one of the best. Our strain is a good selection. Pkt., 10c; oz., 15c; ¼ lb., 35c.

IMPROVED GUERNSEY. An improvement over the parent, "Hollow Crown," but it is much larger in diameter, though not so long. The roots are more easily gathered. This sort gives general satisfaction. Of excellent sugary flavor. Pkt., 10c; oz., 15c; ¼ lb., 35c.

EARLY HALF LONG. This parsnip makes a fine garden vegetable. The tops are only about half the size of Hollow Crown. The roots are short and thick, having a diameter of 2½ to 3½ inches and a length of only 6 or 8 inches at the thickened part. Fully a month earlier than Hollow Crown, it often reaches full size in 100 days from planting time. Pkt., 10c; oz., 15c; ¼ lb., 40c.

Parsley

PARSLEY should be sown early because it is very slow to germinate; and it is best to use radish seed mixed with the parsley seed to mark the rows.

Rich and mellow soil is desirable for best results. When the plants are well up, thin to 8 to 12 inches in the row. When the plants of the curled varieties are about three inches high, cut off all the leaves. New growth will be brighter and better curled.

The rooted parsley provides excellent flavoring for soups and stews. Quantity needed to sow 50 ft., 1 pkt.; 200 ft., 1 oz.

★**Vaughan's Champion Moss Curled.**

Robust, compact plants are quickly produced; the leaves are so crumpled and curled as to have the appearance of curled moss, with rich, green color; it is quite hardy, slow to run to seed and may be grown in pots or window boxes. Pkt., 10c; oz., 25c; ¼ lb., 50c.

FERN LEAVED. Leaves so nicely and delicately cut as to resemble the fronds of a fern. Good green color and flavor. Pkt., 10c; oz., 25c; ¼ lb., 50c.

Vaughan's XXX Parsley. The daintily curled leaves of delicate green, appetizingly fresh and beautiful, add zest and richness to substantial or delicate viands. It grows very dwarf in the garden—many of our customers plant it as a border. It also is valuable in the hotbed, greenhouse, or in pots in winter, taking small space. Vaughan's XXX Parsley was chosen after many trials and a careful inspection trip through Europe. Pkt., 10c; oz., 20c; ¼ lb., 50c.

PLAIN or ITALIAN. The leaves are not curled. However, the flavor is excellent and plant is very hardy. Pkt., 10c; oz., 15c; ¼ lb., 35c.

DOUBLE CURLED. A very fine dwarf, handsome green, curled variety. Pkt., 10c; oz., 15c; ¼ lb., 40c.

HAMBURG ROOTED or GERMAN. The root resembles a small parsnip. Used for flavoring soups. Our strain is exceptional. Pkt., 10c; oz., 20c; ¼ lb., 50c.

VAUGHAN'S BOTTOM ONION SETS

Onion Sets and Plants

THE first home garden harvest in the spring is young onions from sets. If perennial sets are planted in the fall, a crop is reaped long before the first outdoor seeds have sprouted. Spring sets can be put into the ground as soon as it is able to be worked and in a few weeks the delicious young onions are ready to serve on the table. Plantings may be successively late into the summer, as long as the sets remain in good condition.

Quantity needed for 75 to 100 ft., 1 qt.

WHITE BOTTOMS. Our sets of these are very choice, small, dry and unsprouted. Pt., 20c; qt., 30c; ½ pk., 50c; pk., 80c.

We sell in fall only, to be planted for early spring crop. Pt., 20c; qt., 35c; ½ pk., 60c; pk., \$1.00.

WHITE MULTIPLIERS. Especially valuable for the First Early Spring Bunch Onion. They are of a pure silvery-white color which runs well up the stem, and in flavor, very mild and sweet, far superior to the green onions from other sets. There are usually several stalks from a single bulb and in this way they are very productive. Their most important quality is extreme earliness, being ready for eating ahead of any other kind. Pt., 25c; qt., 40c; ½ pk., 95c; pk., \$1.75.

SHALLOTS OR YELLOW MULTIPLIERS. Flavor much superior to ordinary onions. Pt., 20c; qt., 30c; ½ pk., 60c; pk., \$1.00.

Big Bermuda Onions From Your Back Yard

Winter Onions

★**Southport Yellow Globe.** 110 days. The Vaughn strain of this ball-shaped onion is the most uniform on the market today. Our Eastern seed bulbs are hand sorted and grown under our direct supervision. The ideal Golden Yellow market onion.

Eastern-Grown Seed—Finest type; sold by us for many years. Pkt., 15c; oz., 40c; $\frac{1}{4}$ lb., \$1.00; lb., \$3.50.

California-Grown Seed—Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 90c; lb., \$3.00.

SOUTHPORT RED GLOBE. 120 days. A little deeper than Southport Yellow Globe, in color a rich dark red. California grown seed produces a lighter colored onion. A wonderful keeper with finely bred neck and a heavy yielder. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 80c; lb., \$2.50.

★**Vaughan's Special Yellow Globe.** 90 days. ("MOUNTAIN" DANVERS.) Slightly smaller than Southport. When aphid damages the late onion crop it does not harm this variety, due to early maturity. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; lb., \$2.75.

LARGE RED WETHERSFIELD. 100 days. An onion of very productive habit and a fine keeper. The skin is deep purplish red, which covers a round, somewhat flattened bulb of purplish white flesh. Moderately fine grain and mild flavor. In poor soil it does best, growing a thinner neck than in strong soil. It is standard in its class in the south and southwest. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 70c; lb., \$2.25.

FANCY YELLOW GLOBE DANVERS. 110 days. This is early, almost true globe-shaped, beautiful yellow skin, pure white flesh, of very fine quality. It has a good size, and a fine thin neck. Vaughn's strain is so near to globe-shape that it passes for globe on the market. The crop ripens uniformly at one time, and its keeping quality is excellent. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 90c; lb., \$3.00.

BRIGHAM YELLOW GLOBE ONION. A strain of Southport Yellow Globe, grown and selected for years by Mr. Brigham of Decatur, Mich. While not as uniform in shape, it is among the best in production and keeping qualities. It may be grown successfully on either muck or heavy soil. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 90c; lb., \$3.00.

OHIO YELLOW GLOBE. 110 days. Of uniform shape, beautiful color and fine size, it out-classes the old type Yellow Globe Danvers. Its finely bred neck, large size, solid flesh of mild sweet quality, uniform growth, heavy yielding and superb keeping quality have made it a favorite. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 90c; lb., \$3.00.

VAUGHAN'S IDEAL WHITE GLOBE. 120 days. A strikingly handsome onion; very early, ripens evenly and is a fine keeper; the small, high-bred neck tells the story of quality; it is a true globe, pure white. Pkt., 10c; oz., 45c; $\frac{1}{4}$ lb., \$1.15; lb., \$3.75.

JAPANESE OR EBENEZER. 100 days. There has been a tremendous demand for this yellow skinned onion for the growing of Onion Sets. Japanese Onion Sets produce a much larger tonnage of marketable onions than does the old Strasburg or Danvers. Moreover, a smaller per cent of the sets run to seed. Ebenezer is a fine keeper, mild and well flavored. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; lb., \$2.75.

It is a heavy yielder and a fine keeper. Pkt., 15c; oz., 35c; $\frac{1}{4}$ lb., 90c; lb., \$3.00.

Golden Globe.
Pkt.,
15c.

ONIONS are of two general types, the hard, dry type grown for winter use, in which uniformity of shape, thickness of skin, and size are quality points; and the much larger, juicier and milder Spanish or Bermuda type, which is eaten raw in salads in both the sprout and the bulb stage.

Our strains are grown from mature onions which have been carefully inspected for conformation to type, and excel in productiveness and uniform quality. The small additional cost over ordinary seed is insignificant compared to the great improvement in your crop. Quantity needed to sow: 25 ft., 1 pkt.; 125 ft., 1 oz.; acre, 6 lbs.

★**Riverside Sweet Spanish.** 110 days. This grown strain of the Spanish (Denia) onion. With us it grows larger than the American Prizetaker and does not produce the "stiff-necks" usual in the Spanish type. It is the most popular onion in Southern California and when grown as a specimen attains enormous size, 4 to 4 $\frac{1}{2}$ pounds. In color it has a cream or pale yellow tint. Pkt., 10c; oz., 35c; $\frac{1}{4}$ lb., 85c; lb., \$2.75.

YELLOW BERMUDA. 60 days. In Bermuda and Texas a great many carloads of these very large onions are produced annually; they are shipped north for early spring use. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 85c; lb., \$2.75.

MAMMOTH SILVER KING. 100 days. Averages 15 to 22 inches in circumference and weighs 2 $\frac{1}{2}$ to 4 lbs. It matures early and is uniformly large and of good shape. Flat, but thick. Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 80c; lb., \$2.50.

TYPICAL FRUIT OF RIVERSIDE SWEET SPANISH (LIFE SIZE). Pkt., 10c.

★**Riverside White Spanish.** 110 days. Large-ish type, bred from parents noted in Spain for size and mild flavor. It is unequaled for the production of tender, mild green onions for table use, and if grown to maturity produces a large white bulb of remarkable keeping qualities. We recommend it to home gardeners for eating raw both as green onions and in its mature stage. Pkt., 10c; oz., 40c; $\frac{1}{4}$ lb., \$1.00; lb., \$3.25.

★**Prizetaker—American Grown.** 100 days. Among large onions this one is exceptional for size and beauty; it is of the same type as the large Spanish onions, imported and sold for high prices. Vaughn's American-grown seed has become thoroughly acclimated through many years of very careful, painstaking culture. Prizetaker is a yellow globe that matures to great size under right conditions; it requires a long season and should be started early in hotbed. When properly ripened it is a good keeper. Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 70c; lb., \$2.25.

PEAS are rich in sugar, which begins to turn to starch when they are picked; thus home gardeners alone can enjoy this crop at its best. It is said that the more wrinkles a pea has, the more sugar. Smooth seeded varieties are not so sweet and tender, but they can be planted earlier, as they resist rot.

Where hot dry summer weather cuts short the crop, the problem is to get the heavy yield, large size and sugar content of the late sorts into early yielding varieties which will bear a crop before the summer's drought arrives. Our strains are selected for these qualities. Quantity needed for 100 ft., 1 lb.

Pea Cultural Notes

Peas are a cool-weather crop. They should be sown when the ground is ready to work, without delay. The smooth seeded sorts will stand cold and freezing weather without rotting in the ground, but they are not so tender or sweet on the table as the wrinkled kinds, which are more risky in the wet soil, but still worth taking a chance to get early. Dwarf peas are best suited for the garden where space is scarce. They are early and bear well. It is important to have rich soil, somewhat light, and to give plenty of water if a full crop is to be produced. It will pay to use a balanced commercial fertilizer in the row when the seeds are sown. Do not crowd the seed. It is better to sow in single rows, with two inches between the seeds, or in double rows, the rows six inches apart, and seeds two inches apart. Closer sowing will produce no greater crop.

To Mail Order Buyers

See your Order Blank on Page 3 for special Mail Order Offer on packets, ½ lb. and 1 lb. units of Peas, Beans and Corn, which will save you money on these important food crops.

MEDIUM HEIGHT

A HEAVIER yield without sacrificing quality is obtained from the varieties of peas which require some support. The varieties listed below grow to three feet high and should be given support of chicken wire or brush between companion rows. The smooth podded sorts may be sown first, and if not allowed to mature too much, will be found to be of good table quality.

★**World's Record or Improved Gradus.** 58 days. Gradus is the greatest of the wrinkled peas; it is large, early, and in flavor equal to the best wrinkled kinds. It is tender and should be planted in the warmest spot in the garden. Vines 30 inches, pods 4 inches long, beautiful green color, with 7 to 10 or more rich, tender peas in each. Pkt., 10c; ½ lb., 20c; lb., 35c; 2 lbs., 60c; 5 lbs., \$1.15; 10 lbs., \$2.00.

★**THOMAS LAXTON.** 62 days. This is a selection of Gradus. The season is identical, but the pods are square at the end and deeper green. Vines are 3 to 3½ feet high. A better yielder than Gradus. Pkt., 10c; ½ lb., 20c; lb., 35c; 2 lbs., 60c; 5 lbs., \$1.15; 10 lbs., \$2.00.

★**ALASKA—CALLED EARLIEST OF ALL.** 57 days. Alaska and "Maud S." are in all but color the same; Alaska seed is bluish in color; it is standard for market and canning. Pkt., 10c; lb., 30c; 2 lbs., 55c; 5 lbs., 90c; 10 lbs., \$1.70.

★
Varieties designated by a star as illustrated above are recommended as of especially fine strains and suited to the home garden.

Tall Peas Yield Best

THE gardener who takes pride in his peas and whose space is unlimited will find the tall-growing sorts unequaled for length of season, heavy yielding and high quality. Support should be given and they should be planted with plenty of room. Liberal fertilizing will be well repaid.

Inoculate Peas For Good Yield

Peas, Beans and Sweet Peas belong to the Legume family—plants that bear their seed in a pod. All legumes form a partnership at the roots with bacteria that are able to secrete nitrogen and give it to the plant. To stimulate these germs it is necessary to "inoculate" the seed.

VAUGHAN'S IMPROVED EARLY OHIO (RED). A week to 10 days earlier than other strains of the same variety. The reason for this is not only in the great care with which our seed is selected, grown and housed, but it is produced under conditions which are the most favorable in the Red River Valley of Minnesota, the natural home of high-class potato seed. 5 lbs., 30c; 10 lbs., 50c; 30 lbs., \$1.10; 60 lbs., \$1.80.

The type is very uniform and in cooking and eating qualities it is unsurpassed. Katahdin does well on rich peat soils and on muck. 5 lbs., 35c; 10 lbs., 60c; 30 lbs., \$1.25; 60 lbs., \$2.25.

Long Season Radish Mixture.

½ oz. pkt., 15c.

This is a mixture composed of equal parts of the following early midseason and late varieties: Scarlet Globe, Giant Butter, Icicle, Brightest Long Scarlet, and White Stuttgart. Sow thinly in the row, and harvest as they mature. This mixture will provide an interesting assortment of radishes for the table, spread over two months of harvest.

RADISHES from April to December are possible for the home gardener who sows early, midseason, summer and winter types.

Our strains are grown with the greatest care, which involves considerably increased cost, but the additional cost is small compared with the great difference in your crop.

Radishes supply the first home garden harvest in the spring, and winter radishes may be enjoyed as late as Thanksgiving. Quick growth is the secret of success. A rich, light soil is required. The globe and olive varieties grow faster than the long type, and turn pithy sooner, so they must be harvested promptly and will not enjoy hot weather. The long types grow more slowly and are slower to turn pithy, so they endure heat better. Winter radishes should be sown in June or later and allowed to develop in the cool, moist fall weather. Quantity needed for 15 to 20 ft., 1 pkt.; 75 ft., 1 oz.

SUMMER RADISHES

When hot weather comes and spring varieties would turn pithy or run to seed, the varieties listed below will keep in good condition for a long time and furnish a most welcome tang to the salad course. Note that they mature more slowly, so sow them early enough. All of the following:

Price, pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.00.

VIKING SPINACH, ALL AMERICA WINNER. Pkt., 10c.

Oyster Plant (Salsify)

THOUGH not as generally grown as it should be, this is, when cooked, a really delicious vegetable, surpassing in richness of flavor both carrots and parsnips. It acquires a decided oyster flavor after a good frosting. Roots for winter use should be lifted in the fall, while those for early spring use may be left in the ground over winter.

MAMMOTH SANDWICH ISLAND. This variety is much more uniform in growth than the old standard "Long White" Variety; it is twice the size and weight; the roots are of superior quality and most delicate flavor. Pkt., 10c; oz., 25c; ½ lb., 75c.

Garden Sorrel

Is boiled and served like spinach, also delicious for soups. As the hot sun tends to increase its acidity, a northern exposure is advisable. It should be sown in drills 18 inches apart. It is hardy, but the roots should be divided every four years. Pkt., 10c; oz., 25c; ½ lb., 60c; lb., \$2.00.

Swiss Chard

★**"Cut and Come Again."** 45 days. This vegetable gives maximum returns for little care and space; it yields a constant crop from July to winter. The leaves are used for greens the same as spinach or beet tops. Sow early in spring, in rows 16 inches apart, and thin out to 6 inches in the rows. The leaves grow very large. Cut the leaves off and new ones grow quickly. As it grows, thin out for use and keep clear of weeds. Leaflet of recipes enclosed upon request. Pkt., 10c; oz., 15c; ½ lb., 30c.

CUT & COME. LARGE WHITE RIB-SWISS CHARD. Pkt., 10c.

LUCULLUS SWISS CHARD. 55 days. A new Moss Curled sort. Very large leaves. The mid-ribs are very broad and form a good substitute for asparagus during the summer months. Pkt., 10c; oz., 15c; ½ lb., 35c.

LARGE WHITE RIB. (Dark Green.) The leaf is large, smooth, dark green on a long fleshy stem, 1 to 2 inches wide, and makes an excellent substitute for asparagus when cooked with milk. The leaves are fine for greens. Pkt., 10c; oz., 15c; ½ lb., 35c.

FORDHOOK. This variety resembles Lucullus, but is a darker green. Pkt., 10c; oz., 15c; ½ lb., 35c.

New Long Season Spinaches with Savoy Leaves

They Prolong the Harvest

SPINACH delights in cool, moist weather. Seed should be sown at the earliest possible moment in spring in rows one foot apart and thinned to six inches in the row. It matures in 45 to 50 days and quickly runs to seed in warm weather. The Antvorskov variety, listed below, is most free from this tendency. Home gardeners have generally adopted Swiss Chard and New Zealand Spinach as a greens crop, as both may be cut many times and will produce a continuous crop until freezing weather in the fall. A fall crop of spinach may be sown in late July or August and will find the cool, moist autumn weather favorable for growth. The value of spinach in the diet has been scientifically established by the vitamin investigation.

★**Summer Savoy.** 45 days. A further advance over Long Standing Bloomsdale, darker green, 3 to 4 days longer standing and extraordinarily uniform. It is a trifle more curled, but its greatest advantage is its better performance in summer. Our experience is that for early summer and fall cutting our regular Long Standing Bloomsdale is excellent, but for summer use the Special Summer Savoy gives the best results. Special Mention All America Trials 1937. Pkt., 10c; oz., 15c; ½ lb., 30c; lb., 85c.

★**Winter-Giant.** 50 days. A variety of recent introduction which has proved fine for winter. It is smooth, large leaved and does not bolt quickly. Special Mention All American Selections 1937. Pkt., 10c; oz., 15c; ½ lb., 30c; lb., 85c.

★**Viking.** 45 days. This 1935 All America winner bears largest leaves of the thick-leaved type, and is almost as long-standing as King of Denmark. Its leaves are smooth to slightly crumpled, dark green, and of excellent quality for home and market. Pkt., 10c; oz., 15c; ½ lb., 30c; lb., 85c.

★**King of Denmark.** 48 days. (Antvorskov.) In our trials this variety has been slower to run to seed than any other sort. Antvorskov forms quite large tufts (or rosettes), compact and low. The numerous leaves are extra large, broad and rounded, exceedingly bushy, slightly crumpled and of a glossy dark green color. Pkt., 10c; oz., 15c; ½ lb., 25c; lb., 60c.

★**Bloomsdale Long Standing.** 45 days. Latest of the Long Standing Spinach introductions. Improvement was accomplished through the selection of hermaphrodite plants (bisexual), which run to seed much more slowly than the unisexual. This variety is of better quality than the Antvorskov (King of Denmark), having larger and Savoy type leaves. Pkt., 10c; oz., 15c; ½ lb., 25c; lb., 60c.

★**Nobel Giant Thick Leaved.** 45 days. The seed of this thick-leaved variety produces the largest spinach under cultivation. It grows rapidly and remains in good condition a long time. The medium-green leaves are large, rounded, slightly crumpled, succulent and tender. It is an excellent home garden spinach. Pkt., 10c; oz., 15c; ½ lb., 25c; lb., 60c.

★**Bloomsdale Dark Green.** 43 days. The leaf is savoyed, or crinkled, and of a darker green than Bloomsdale Long Standing. The dark color is preferred in some markets. Pkt., 10c; oz., 15c; ½ lb., 25c; lb., 60c.

PRINCESS JULIANA. 50 days. This is a new type of "Long Season" Spinach. The leaves are of good size, very dark green, well crumpled and thick. The first plants of Spinach to bolt to seed are the male plants. (Spinach is generally dioecious; i. e., there are male and female plants.) This first bolting seed has been eliminated in this new race by the production of hermaphrodite plants, these plants seeding much later than male plants. Pkt., 10c; oz., 15c; ½ lb., 25c; lb., 60c.

OLD DOMINION. 40 days. The same as Virginia Blight-Resistant in type and quality. Will eventually take the place of Virginia because of its long standing qualities, which permit early fall planting. Pkt., 10c; oz., 15c; ½ lb., 25c; lb., 70c.

VAUGHAN'S SPECIAL. 50 days. An early, smooth leaved spinach being more upright in growth than other spinaches and nearly a long standing variety. Easily cleaned and very tender. Pkt., 10c; oz., 20c; ½ lb., 35c; lb., 85c.

PRICKLY SEEDED HOLLANDIA. Pkt. 10c; oz., 15c; ½ lb., 25c; lb., 70c.

BLOOMSDALE or NORFOLK SAVOY-LEAVED. 40 days. Is a very hardy sort; the leaves are very thick and blistered, making it a fine shipper; it is a good standard size, and a great favorite with southern truckers. Pkt., 5c; oz., 10c; ½ lb., 20c; lb., 50c.

★**New Zealand Spinach.** Tetragonia Ex-pansa. 60 days. While this is not a member of the Spinach family proper, it furnishes an abundance of delightful "greens" throughout the summer and right up to cold weather. Both the leaves and the stalks of the plant are very fleshy and extremely brittle and of the finest quality when cooked. Do not sow seed until May 1st or when the soil is fairly warm. Plant in rows 3 feet apart and thin the plants to stand 2 feet apart in the rows. Soak the seed before sowing. Pkt., 10c; oz., 20c; ½ lb., 50c.

Tobacco Seeds

BIG HAVANA. A hybrid Havana. Pkt., 10c; ½ oz., 30c; oz., 45c; ¼ lb., \$1.25; lb., \$3.75.

Delicious Squashes and Marrows

SQUASH are growing in popularity with home gardeners. They must be sown in warm, rich soil in hills 8 to 10 feet apart for the vine varieties and 3 to 5 feet for the bush sorts. The squash borer is the principal enemy, and the best protection against it is to cover the vine with soil at several joints. It will take root where covered and limit the damage done by the borer. Vegetable Marrows are considered by many to be superior in flavor to egg plant if sliced when half grown and fried. All squashes may be baked and eaten with butter, in which form they oftentimes are relished by persons who dislike them when mashed and boiled.

*Acorn, Table Queen, or "Des Moines."

58 days. Illustrated on back cover. We can truly say that the height of Squash quality is still unknown to one who has not eaten half a Table Queen baked and buttered. In size Table Queen equals a fair sized husked coconut, and a half, baked, serves one person amply. The shell is usually thin and it does not require over twenty minutes for baking or boiling. The color is dark green, keeping this color after picking and storing. The meat is dry and mealy. It yields enormously—a few hills furnishing an ample supply for a good sized family. (*Cucurbita Pepo.*) Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.50.

*New Squash "Kitchenette" (Hubbard).

110 days. A small edition of the Hubbard Squash developed by inbreeding and introduced by the Minnesota Experiment Station. It was named "Kitchenette" because it is the smallest Hubbard. The squash average about 5 pounds. They are a glossy dark green, fully equal to any Hubbard for quality and keep as well in storage. (*Cucurbita Maxima.*) Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.50.

*Vaughan's Chicago Warty Hubbard.

120 days. Vaughan's Chicago Warty Hubbard Squash has been bred to the highest quality; fruits are large, rough dark green skin, flesh is bright orange, fine grained, rich and dry. (*Cucurbita Maxima.*) Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.50.

SWEET POTATO SQUASH. Pkt., 10c.

*"Sweet Potato." 55 days. A valuable addition to the list of small squashes, is of fine flavor, becoming a popular feature of fall and winter menus. When baked and served with melted butter it is a table delicacy of the first order. (*Cucurbita Pepo.*) Pkt., 10c; oz., 25c; ¼ lb., 65c; lb., \$2.00.

Turnips for the Table

TURNIPS are cool weather plants and thrive best in spring and fall. For early use seed should be sown as soon as the ground can be prepared and will give roots large enough for the table in six to ten weeks. For the fall crop seed should be sown June to August and the plants will grow until freezing weather, when they should be harvested and stored. Rutabagas, after a touch of frost, are a delightful addition to the winter diet. To avoid maggots, it is best to sow turnips on different soil each year.

Ponderosa Wins the Prize for Largest Tomato

WE have specialized for years in highly selected strains of tomato, many grown on our own farms, and others produced by specialists under contracts which require the rigid selection of fruits from which seed is saved. With the growing importance of disease resistant strains, we have conducted our own trials of each improved resistant variety introduced, and offer originators' strains of those which have proved their merit.

Home gardeners as well as market growers will find that quality strains of tomatoes excel other seed of the same variety to so great an extent that the size and quality of their crop will be affected far in excess of any difference in the price of seed.

Tomatoes should be started indoors and those unable to do this should purchase plants. The plants may be set in the garden when danger of frost is over. It is important to give them a quick start after transplanting by frequent watering and fertilizing. They should be sprayed with bordeaux mixture to prevent disease, and with arsenate of lead to keep off the tomato worm. Hot sun is needed to ripen tomatoes and plenty of water to keep them growing. If trained to stakes or trellises they will ripen sooner.

Quantity needed for 150 plants, 1 pkt.; for 2,000 plants, one ounce.

★**Ponderosa—The Giant Tomato.** Matures in about 118 days. Of the large fruited varieties, this one is most popular. The vines are strong in growth, and when planted in good soil and pruned to a single stem, the fruit reaches one pound in weight. Tomatoes grow in beautiful clusters. The fruit is mostly oblong in shape, usually ribbed, is deep purple color, has solid flesh of sweet flavor, and small seed cells. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.75.

★**Vaughan's Select Earliana.** 94 days. Earliest large, smooth bright red tomato. Our strain shows few, if any, of the rough fruits found among many strains of Earliana. For the Herb Garden

INTEREST in herb gardening is reviving for two excellent reasons: the ornamental quality of herbs, and their value for contributing flavor to the menu and fragrance to the home.

To enlarge our herb list it was only necessary for Vaughan's Seed Store, which was established in 1876, to go back to old catalogs when wood cuts were used as illustrations. A few of the wood cuts are reprinted, as they show in excellent detail the habit of growth and leaves of the plants.

To keep herbs over winter, stalks should be cut on a dry day, when not quite in full bloom. They should be dried in the shade and when dry packed tightly in boxes with air excluded. Varieties marked (*) are perennials.

MIXTURE OF ANNUAL HERBS. This is intended to meet the needs of those who want a row or bed of herbs, without buying a full packet of each variety. Sow in a row, thinning out and transplanting to proper distance. Pkt., 15c.

How to Sow Flower Seeds

IN FIVE paragraphs below, designated A, B, C, D and E, we cover in considerable detail the methods of starting flower seeds which are available to the amateur without a greenhouse, and which cover well the needs of an outdoor garden. In the flower seed section in the case of each flower listed, information is given as to the cultural methods which can be used for that subject, together with the most

favorable time for propagating. While our cultural instructions are thorough, they should be supplemented by reading in good gardening books and by obtaining at first hand advice from successful gardeners in your neighborhood. Success in gardening requires study, and the opportunity for enlarging one's information and trying out new things is one of the most fascinating features of gardening.

A Sow in the bed, border or row where the plants are to grow. The soil should be loamy, with well pulverized surface. With heavy soil inclined to cake and crack, it is usually best to grow plants in a seed bed (B) and transplant to the permanent place. Loosen the soil where seeds are to be sown, with the trowel, or hoe, several inches deep. Rake smooth. Broadcast small seeds and cover them lightly four or five times their diameter. Very small seeds may be merely pressed in. Larger seeds may be planted singly, well covered, but more thickly than plants are wanted. Firm the soil well over the seed. Watering now becomes of great importance. At no time should the soil be allowed to become hard and dry, yet excessive watering may cause the seeds to rot, sour the soil, or cause "damping off." When the plants appear, thin them out, allowing each to grow singly, without crowding. The distance between them is governed by their ultimate size and spread. Excess plants may usually be moved to a new location.

B Sow in outdoor seed bed, to be transplanted. The seed bed in the open should be of loose, mellow loam, raised slightly above the surrounding surface, and preferably surrounded by a wooden curb, to prevent rain washing across it. It should not be wider than four feet, so it can be worked easily. Shelter from high winds is valuable, but damp and shady corners are not desirable. Full sun is advisable when seedlings are up, while shade when needed, as in mid-summer for perennial seedlings, is best supplied by a lath or cloth canopy, which can be removed in damp and cloudy weather. Sow the seeds in rows which may be as close as five inches. Sowing and watering are the same as described in "A" above. Seedlings may be transplanted when they make true leaves, the second pair of leaves to appear; or they may be left until larger before being moved to their permanent location. Perennials should be moved from the seed bed to a nursery row, to grow until fall before being moved to the border.

C Sow in flat, pot or pan outdoors or in a cold frame. This method is applicable to slow germinating subjects, some of which may take a year to germinate. Fill the receptacle with potting soil as described in "D," firm the soil and broadcast the seed, covering four or five times their diameter. Place the receptacle in a shaded location, where there is free air circulation. During the spring, summer and fall, water often enough to prevent soil from drying out.

A mulch of peat moss will help retain moisture. In winter, place in a protected place outdoors and cover with leaves. Have patience with slow germinating subjects; do not disturb too quickly. Any live seed will eventually grow if given time enough, provided soil, moisture supply, etc., are right. When seedlings appear and make true leaves, transplant to pots, nursery row or permanent location. If moss forms on soil surface, sprinkle fresh earth over top.

D Sow indoors in a box, pot or pan. This method may be followed where there is a window facing south, enjoying sunlight most of the day. Use a standard florists' pot or pan (shallow pot) or a "flat", which is a shallow box, with holes bored in the bottom for drainage. Cover the drainage holes in pot or box with broken pottery; fill with potting soil. This is a mixture of half sand and half black loam. It may be obtained from florists. Firm the soil, and sow the seeds in rows, marking each row to identify the sowing. Water by setting the box or pot in water, so that it soaks up from below, or use a fine spray which does not wash the soil. Place in a dark place, covered with a wet newspaper blanket until the seeds sprout. As soon as sprouts appear bring into full light. Cover the box or pot with glass to check evaporation, but when moisture collects on glass wipe it off, and prop up one end of the glass to allow air to circulate during the sunny part of the day. A temperature not below 50 degrees at night, or 75 degrees by day, is best. Do not allow the soil to dry out. When the seedlings have made true leaves (the second set), they should be transplanted to other flats, giving at least two inches of space apart; or they may be moved to small pots or to an outdoor seed bed or border.

E Sow in a hot bed or cold frame. A cold frame or a hot bed heated by manure or other means may be used. The best method with flower seeds is to sow seeds in flats, which are placed in the frame. With manure heated beds, seeds should not be sown until the temperature of the newly made bed has dropped to 90 degrees. Watering and ventilation are important. On sunny spring days, always prop up one end of the sash to prevent overheating, which may occur quickly and cause spindly growth. Do not allow the soil to dry out. When the seedlings have made true leaves, they should be transplanted to other flats, spaced two inches apart each way; or to the soil in the hot-bed, or to an outdoor location, if late enough.

Wilt Resistant Asters

REMARKABLE progress has been made in breeding Asters resistant to Fusarium Wilt. This disease is widespread, but even if not in your neighborhood, you will find the Resistant Asters so much more vigorous and productive, it will pay to use them. While these asters are not immune from the Yellows disease, which is insect-borne, and distinct from the Wilt, they are far less susceptible to infection and injury from it. Where we offer the Wilt Resistant Strain of a variety, we have omitted the ordinary strain from our list.

Snapdragons from Giants to Dwarfs

Culture: A or B (March-April), D or E (Febr.-March)

By developing a strain of snapdragons immune to rust, scientists of the University of California have restored this brilliant flower family to leadership as a garden subject. Rust is a widespread disease which discolors the leaves and saps the vitality; if you have found snapdragons difficult to grow, rust is probably responsible. Growing the Rust-proof strain, difficulties disappear. Seeds germinate better, plants are more vigorous, the foliage clean, flowers large and of fine color and the flowering season prolonged.

Heavenly Blue Morning Glory

2941 CLARK'S EARLY FLOWERING

One of the few flowers of true blue and probably finest of all morning glories. Flowers measure $3\frac{1}{2}$ to 4 inches across, deep blue with white throat. They blossom profusely and for a long season, opening in the morning and facing the sun. To sow indoors, nick through hard outer shell of seed with knife or file. Then sow in flower pot, in good friable soil, and place where bottom heat of at least 70 degrees is provided. Keep indoors until weather is warm. If sown outdoors, do not sow until the ground is warm and summer established. Give plants full sun and do not overfeed as this may limit flowers. Sow in gravelly, sandy soil and give southern exposure. Oz., \$1.00; $\frac{1}{4}$ oz., 40c; pkt., 15c

2901 NEW GIANT CORNELL

The flowers, as large as Heavenly Blue, are an intense carnelian red with pure white border, reproducing the colors of Cornell University. Growth is rapid and flowers come early, when vine is two feet tall, increasing in number until killing frosts arrive. Our exclusive novelty. Pkt., 25c

Fragrant Double Nasturtiums

Culture: A or B (May 15th-June), D or E (March-April)

NASTURTIIUMS will really grow on soils incapable of supporting any other plants, and are most useful on dry, sandy, or gravelly banks. In very dry seasons the Tall sorts have a tendency not to run on a poor soil, and if a trellis is to be covered quickly the plants should be encouraged by watering in the early stages of growth; in wet seasons the Dwarfs have a tendency to run and to produce more leaves than flowers, and they should therefore be sown on poor soil.

Aphis on Nasturtiums. One of our friends writes in "Horticulture": "I am not troubled with aphis if I sprinkle moth balls on the ground quite close to the stems of the plants."

New Giant Pansies

Culture: C (May-July); Pot up July-Sept., winter in cold frame.

PANSIES, garden favorites since Shakespeare's time, have been marvelously improved. One may select from the strains listed below for whatever quality one may prefer—for size, color, or free blooming—in some cases finding all three combined. In the Swiss Giants and Maple Leaf Giants, a size has been attained which not long ago would have been incredible. To have a bed of pansies one must start the seed in the house in early spring and transplant when danger of frost is over, or else plant in fall in cold frame and winter over. Seeds may also be sown in spring out-of-doors for late summer and fall flowering.

Gold-Veined Salpiglossis

Culture: A or B (March-April)

ONE of the easiest of annuals to grow, the salpiglossis is in appearance an aristocrat, which is prized in the gardens of the wealthy. It is rich in deep color tones rare in the floral world, which are set off by veins of gold, marking every petal. The rule for growing salpiglossis is, give it room and do not coddle. Sow in the full sun in fairly rich soil as early as possible, and preferably in the place where it is to grow, to avoid transplanting. Do not overwater, but keep "on the dry side." Its blossoms, similar in shape to a petunia, on strong stems are borne profusely until frosts kill the plants. 30 inches.

New Colors in Stocks or Gilliflower

Culture: A or B (March-April), D or E (Feb.-March)

STURDY flower spikes covered with rosette blossoms in soft colors of an exceptional tone range rise above the attractive dull or glossy foliage to a height varying in the different classes. Stocks require a rich soil of a sandy, well manured loam, mixed with compost, well rotted sod and plenty of well decayed manure. Only about 60 per cent of the flowers will come double, the rest are single. Sow seed early in the house and transplant outside when all danger of frost is over. Hot weather is responsible for the blind growth that so frequently disappoints out-door growers of this crop. Stocks are a cool temperature crop and that should explain why they sometimes disappoint us during the summer months.

Stately Delphinium

(Hardy Larkspurs)

Culture: B (Mar.-Sept. 1st), D or E (Mar.-May)

Modern hybrid Delphiniums have become the dominant flowers in the perennial border of late June. In deep, rich soil, they grow six feet tall or more, with huge spikes of large flowers, varying in colors from the darkest violet to pale lavender. Lower growing types are also valuable for both border and cut flower use: the Chinese and Butterfly types are fine for bedding. With hybrids, plants established several years produce the best flowers. If the bloom is cut down to the ground, a second flowering spike is produced.

NOTE—A teaspoonful of sugar in the water will delay shattering of cut delphiniums two or three days.

PROLONGING THE LIFE OF CUT DAHLIAS

Many plans have been tried to make Dahlias look well when cut. We have found that the hot water treatment is the most effective. After the Dahlias have been cut the foliage is stripped from the stem except at the top; recut the stem and immerse in water as hot as the hand can bear, being sure that none of the foliage gets in the water. When the water cools the dahlias are transferred to a pail of cold water and left in the cellar over night. We have found that they keep several days and increase in size.

THRIPS TREATMENT

Vaughan's bulb farms in Michigan and the mountains of Tennessee are free from thrips. This insect pest is prevalent in many sections, however, and your planting may become infested from some neighboring focus. If thrips are to be near you, prevention is advisable. Rotenone sprays and dusts are effective. (See page 106.)

The U. S. department of agriculture recommends after plants have reached 6-inches in height weekly spraying with the following formula: ¼ lb. Tarter emetic, 1 lb. brown sugar, 6 gallons of water.

We will ship Tarter Emetic postpaid for ¼ lb., 25c; ½ lb., 45c; 1 lb., 75c.

Vaughan's High Grade Fertilizers

THERE are three chemical elements of plant food commonly used in fertilizers. They are nitrogen, phosphates and potash. A balanced fertilizer is one which contains all three, and gives a complete diet to the crop. And the composition of a balanced fertilizer is commonly expressed in a formula of three numbers with hyphens between, thus, 5-8-7. The first indicates the pro-

portion of nitrogen; the second, the proportion of phosphates; the third, the proportion of potash.

Fertilizer prices include delivery within 25 miles of Chicago on 25, 50, 100, 125, and 250 lb. lots. Smaller quantities delivered with orders of seeds, bulbs and supplies of \$2.00 or more. On larger quantities than 250 pounds, owing to close quantity prices, the customer pays all freight or express charges.

Vaughan's Lawn and Garden Fertilizer (4-8-6)

Four per cent nitrogen; eight per cent phosphoric acid; six per cent potash.—This mixture differs from our balanced plant ration, in that it is composed of plant foods in mineral form. The advantages of mineral fertilizer include the absence of objectionable odor, and the quality of being more readily soluble, which makes it more quickly effective upon plant growth. This is an excellent mixture for regular use in the garden plot in small quantities to insure vigorous growth.

For a new lawn, broadcast evenly 30 to 40 lbs. per 1,000 square feet. To stimulate an old lawn, apply 20 to 30 lbs. per 1,000 square feet, and during the growing season, wash it down immediately with the hose to prevent burning. For flowers and vegetables, use from 4 to 6 lbs. per 100 square feet.

Price, 5 lbs., 45c; 10 lbs., 85c; 25 lbs., \$1.25; 50 lbs., \$2.00; 100 lbs., \$3.25; 500 lbs., \$13.75; 1000 lbs., \$26.00; 2000 lbs., \$49.00.

Vaughan's Balanced Plant Ration (5-8-7)

Five per cent nitrogen; eight per cent phosphoric acid; seven per cent potash.—This is a balanced fertilizer, chiefly composed of organic matter (bone, blood and potash), which has been used for 50 years with excellent results by florists, truck gardeners and amateurs, and which we recommend as balanced fertilizer for all around use in the home garden.

For lawns, use 20 to 40 lbs. per 1,000 square feet; and for cultivated gardens, 4 to 6 lbs. per 100 square feet. As liquid manure, use 1 part to 30 parts of water.

HARDY lily bulbs, of 1938 crop, carried over the winter in cold storage, may be planted in the spring, and will blossom in mid-summer, when the garden needs their glory.

Lilies are truly among the most beautiful of all bulbous plants. They are especially suitable for planting in herbaceous borders, and enjoy a position where they are protected by the shade of surrounding plants. Light, well-drained soil is recommended. Bulbs should be planted 5 to 6 inches below the surface, and to prevent the accumulation of excessive moisture, surround the bulb with coarse sand and fill in with a mixture of fibrous loam and leaf-mould.

Many varieties are termed "stem-rooters"—that is, they develop roots on the stem up to two or three inches from the ground. These roots are voracious feeders, and on them depend greatly the number and size of flowers. When they appear, the plant should receive a top dressing of good rich soil on which they can feed freely.

For the smaller varieties, plant in clumps, each bulb about 6 inches apart, leaving more space for the strong and larger species. The most striking mode of planting is in groups of 3 to 9 bulbs in a mass.

Vaughan's Natural Floral Perfumes, Dram 50¢

Accepted today by women of refinement as the world's outstanding true floral perfumes, these will bear direct comparison for quality with the finest of imported odors.

In their accuracy of reproduction of the fragrance of freshly-opened flowers, they are unequalled by any now available.

We particularly invite a trial by women who are accustomed to using perfumes retailing at from two to five times the prices listed below. These prices are low because these perfumes are packed in plain crystal containers—there is no extra charge for elaborate packaging.

THE FOLLOWING ODORS ARE AVAILABLE IN EITHER COLOGNE OR PERFUME

(Cologne is about one-eighth the strength of perfumes (about double the strength of ordinary toilet water). It is used wherever a perfumed lotion is wanted—in the bath, on linens, or as a refreshing lotion in hot weather.)

Bouquet S: A subtle blend of rich floral oils. While not too sweet, it is delicately feminine and rich.

Bouquet X: Another blend, but slightly "drier" and not at all sweet.

Carnation: World-famous as the best reproduction of the true old fashioned flower.

Frangipani: Like Jasmine, but not as heavy and slightly sweeter—considered the world's loveliest floral fragrance.

Geranium: Just like a leaf broken from the green plant. A marvelous reproduction.

Gardenia: Just like the flower—not sweet, like so many so-called Gardenia perfumes.

Heather: A rich "smoky" or "peat" fragrance, wonderful with sports clothes.

Heliotrope: The true sweetness of the Heliotrope flower.

Jasmine: A favorite with women of refinement for centuries.

Lavender: The well-known English Lavender.

Lemon Verbena: An old favorite, and as lemony as the tender green tips of the plant itself.

Lilac: True Lilac after a rain. A fresh, leafy odor, true to the actual flower.

Lily of the Valley: At last, a satisfactory reproduction of this elusive scent.

Magnolia: The true fragrance of the Southern Magnolia, rich, heavy, and very lasting.

Red Rose: The true rich fragrance of the old Damask Rose.

Sandalwood: An old favorite, not too sweet.

Sweet Clover: Like a breeze over a clover field in full bloom.

Sweet Pea: The exact fragrance of the old fashioned Spencer.

Violet: The wood violet, a clean, fresh odor, much softer than the heavy Parma type.

White Rose: Not as heavy as the Red Rose—an old favorite.

Wild Rose: A light delicate fragrance like a breeze thru a hedge row in June—our most popular Rose.

Tuberose: A rich, heady perfume rarely available in perfume form.

New Mown Hay: The clean, soft scent of Sweet Vernal Grass—refreshing as a summer afternoon in June.

Parma Violet: A favorite for centuries; very rich and fragrant.

VAUGHAN'S FLORAL SCENTED SOAPS

From warfare to soap seems a far cry, yet the tremendous demands for fats abroad has robbed the maker of fine imported soaps of his raw material. Because of this, women accustomed to use these fine soaps have been disappointed in the quality of recent imports.

Today we can say that Vaughan's Floral Scented Soaps are not only equal to the best imported brands, but that they surpass them, both in trueness of fragrance and in the quality of stock from which they are made. They are true super-fatted, cold-cream soaps.

They are highly fragrant—when moistened, a single cake will pleasantly perfume the air of an entire room. The odors are of the same high quality as those used in our perfumes. We invite direct comparison with soaps selling at prices from three to ten times as high as these.

PRICES: 3-oz. size, 18c per cake; \$1.80 per dozen. 6-oz., 35c per cake; \$3.50 per dozen.

ODORS AVAILABLE ARE:

Carnation: Fresh and spicy—a favorite even with men who don't care for scented soaps.

Blue Spruce: Softer and less pungent than the above.

Geranium: The fresh leafy odor of an old favorite.

Jasmine: The finest reproduction of this fragrance available in soap.

Lemon Verbena: An old favorite, and as lemony as the tender green tips of the plant itself.

Lavender: The well-known English Lavender.

Lilac: True Lilac after a rain. A fresh, leafy odor, true to the actual flower.
